

Sims vaginal speculum is specula which is inserted into a woman's vagina so that the gynecologist can get a proper visualization of the body cavity and diagnose what the problem may be and how to go about solving it

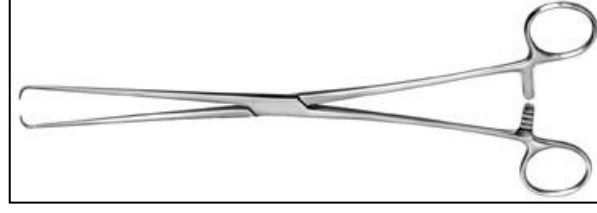

Hegar dilators are dilators used to induce cervical dilation in order to gain entry to the interior of the uterus. They are metal rods developed by Alfred Hegar. Typically, a set of dilators contains rods of increasing diameters, from a few millimeters up to 26 millimeter. The rods are round, slightly curved and have a conal tip

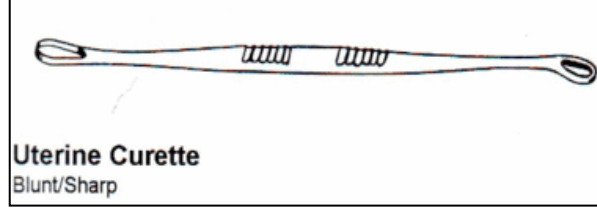

Uterine sounds are intended for probing a woman's uterus through the cervix, to measure the length and direction of the cervical canal and uterus

Ovum forceps are a kind of forceps however these are gynecological instruments since these deal with performing abortions if they may be required

Tenaculum forceps consists of a slender sharp-pointed hook attached to a handle and is used mainly in surgery for seizing and holding parts, such as blood vessels

Uterine Curette
Blunt/Sharp

A curette is a surgical instrument designed for scraping or debriding biological tissue or debris in a biopsy, excision, or cleaning procedure
